

ATRIUMproperty

Additional Features

- Portfolio Inventory
- Estates Management
- Asset Assessment
- Work Delivery
- Occupancy Management
- Planning & Performance

What are Additional Features?

Additional Features are the system-wide add-ons that wrap around ATRIUMproperty’s five Business Areas and core. The integrated modular structure of ATRIUMproperty not only means modules can work together in one seamless system built on a single database platform, but also that the same comprehensive and powerful range of Additional Features can be shared across the range of modules. This unique set of features includes:

- GIS & CAD Integration
- Web Portals & Dashboards
- Mobile Working (PDA & Tablets)
- Document Management (DocMan)
- Advanced Reporting
- Standard Interfaces
- MS Office Integration
- Workflow Wizards
- Ad-hoc Reporting
- BS7666 Gazetteer Integration
- Notifications (Email & SMS)
- Flexi-fields & Data Sets

What do they do?

Additional Features – offer enhanced functionality, accessibility, user-friendliness and integration into the ATRIUMproperty system.

Some, like Ad-hoc Reporting and MS Word Integration, are bundled with ATRIUMproperty. Others, like Mobile

Working, Advanced Reporting and the various Web Portals and Dashboards, are standard add-ons which the client may purchase.

Many are customisable; ATRIUM will work closely with the client during the implementation process to bespoke the add-on feature to ensure it meets client requirements and is fully integrated into their business processes.

ATRIUMproperty - the total property and asset management solution
 Designed to meet all the strategic, management and operational requirements of today’s corporate property and asset managers

PROGRESSIVE - PROFITABLE - SUSTAINABLE -
PROFESSIONAL - APPROACHABLE - INTEGRITY

'Additional Features add real power to ATRIUMproperty. For example, Web Portals & Dashboards enable management teams to monitor work in progress, identify and deal with issues before they become problems, and generally deliver a high quality, efficient and cost-effective service.'

Gareth Edmunds, Product Manager, ATRIUM

Why choose Additional Features?

ATRIUMproperty has a wide range of Additional Features which offer enhanced functionality, accessibility, user-friendliness and integration.

GIS & CAD Integration – works with most corporate GIS and CAD systems, allowing maps and drawings to be viewed without the need for costly licences. Meta data can also be fully presented and potentially captured to populate attributes within the ATRIUMproperty database.

Web Portals & Dashboards – greatly enhance user-friendliness and accessibility by providing web-based entry points to the complete range of ATRIUMproperty modules. It includes standard portals for remote surveyors and property occupants.

Mobile Working – allows standard and user-defined survey data to be gathered in the field, on a stand-alone basis using PDAs, Tablet PCs and Laptop/Desktops.

Document Management (DocMan) – Docman is ATRIUM's integrated Document Management system, allowing users to manage and publish all documents, whether stored in our own database or through integration with other Document Management systems.

MS Office Integration – standard interfaces to MS Word, Excel and Project are included for stationery, spreadsheet and Gantt chart production.

Advanced & Ad-hoc Reporting – enable complex and standard formatted output. Exports in multiple formats, report scheduling, user management and report distribution are included, and Advanced Reporting also allows other data sources to be accessed and combined with ATRIUM. In addition, comprehensively documented reporting schemas are provided, enabling the use of third party reporting tools of the customer's choice.

Workflow Wizards – enable configurable data entry wizards to be built by the client in order to meet precise business process requirements.

Interfaces and BS7666 Integration – ATRIUM has standard interfaces and imports available and can utilise the latest web service based approaches to meet integration needs. Our property address register is BS7666 compliant and a standard interface is available for integration with third party gazetteer systems.

Flexi-fields – a sophisticated facility, enabling the client to customise the system to create their own additional data field sets and labels. It includes powerful integration with the mobile working modules, enabling custom pro-forma survey templates to be created easily.

Notifications – encourage best practice by assisting in the efficient management of key business activities and milestones. They can be used to alert users and others of dates in the business process which are imminent, current or expired. There are three types of notification: pop-ups, emails and SMS.
