aGIS

What is ATRIUM aGIS?

aGIS integrates ATRIUMplanning and ATRIUMproperty with a versatile GIS viewer. This software offers you a powerful and easy mapping and spatial analysis tool, without the need for costly GIS licences. You can store, interrogate and display spatially all your data using ATRIUM's own embedded GIS utility.

What does it do?

- plot application, site and constraint geometries, and associate consultees, policies and conditions with one, several or a complete class of constraints
- use the application wizard to automatically load the relevant constraint sets
- plot consultation area and automatically load neighbour consultee addresses
- uses automated spatial search features to identify standard, statutory and other consultees
- stores one or more map snapshots against each module
- uses spatial searches (eg navigation buttons, address search, drill-down interrogation and polygon searches) to research an area and retrieve application and site histories, standard policies and conditions and other useful information to help determine the application
- works stand-alone or combines with the power of existing GIS systems including MapInfo, Cadcorp and ESRI

Offers you a powerful and easy mapping and spatial analysis tool, without the need for costly GIS licences

PROGRESSIVE - PROFITABLE - SUSTAINABLE -
PROFESSIONAL - APPROACHABLE - INTEGRITY

Why you need aGIS software

ATRIUM aGIS is a cost effective solution to meeting the demands of development control. GIS now an integral part of the planning process, full GIS licences are expensive but ATRIUM aGIS provides the required business functionality at a fraction of the cost.

Why choose ATRIUM?

- We have built ATRIUM aGIS on proven Oracle Technologies. With aGIS you can:

- view and manipulate maps within ATRIUMplanning

- store spatial objects against sites and applications (as opposed to just GIF images and x,y coordinates)
- perform spatial searches using boundary polygons for applications within a given area
- use the spatially enabled application wizard to assist and speed up the process of adding a planning application
- visually display applications and sites stored within ATRIUMplanning
- automate tasks such as policy and constraint checking and adding statutory consultees
- provide a faster and more efficient Neighbour Notification facility than with the client server mode

Why you need ATRIUM aGIS software...

GIS is now an integral part of the planning process, full GIS licences are expensive but ATRIUM aGIS provides the required business functionality at a fraction of the cost

More about ATRIUM

We have been successfully delivering high quality software solutions for more than 10 years. We provide the range of technical skills, including Java. We are a Certified Oracle solution partner and Oracle reseller, and are ISO 9001 certified.

Our aim is to help your administrative systems perform faster, more efficiently and more cost-effectively, using powerful, easy-to-implement technology.

It's a strategy that has seen our customer base grow to encompass more than 50 organisations throughout the UK. These include local government departments, police forces, facilities management consultancies, transportation and others.

ATRIUMplanning - our integrated planning software suite

ATRIUM aGIS is one module in a suite of software packages designed specifically to meet the latest regulatory requirements, e-Government objectives and the business challenges facing Local Planning Authorities.

ATRIUM aGIS can work as a stand-alone or in one seamless system with the other modules:

- Development Control (including appeals, investigations and enforcements)
- e-Planning
- Site Monitoring
- aGIS
