What is ATRIUM e-Planning?

ATRIUM e-Planning enables Local Planning Authorities to meet the demands of the Government's modernising agenda, helping them deliver better services more efficiently, satisfy the growing expectations of both citizens and business, and maximise Planning Delivery Grant and other funding.

What does it do?

ATRIUM e-Planning extends ATRIUMplanning to include a web portal with three elements:

Online Planning Application (OPA)

– enables applicants and agents (whether members of the public, businesses or local government departments) to submit planning applications, monitor their progress, and pay fees online. Key e-Planning features include:

- secure login with user authentication
- seamless interface with the Planning Portal, allowing applicants to use the Portal's 1App form (for standard applications) or ATRIUM's OPA (for Minerals and Waste applications not currently offered by 1App)
- calculate fees and process e-payments
- a way for users to create templates, so that they can save and duplicate partially complete applications - particularly useful for agents submitting several similar planning applications
- pre-application consultation feature for the planning authority to view the draft application and offer professional advice before its formal submission
- system shows current status of application, and can send emails where further information, fees, etc are required

Online Submission Management (OSM)

– the interface between the Planning Portal / OPA and the Local Planning Authority's back-office planning system, OSM can:

- receive validate and register e-planning applications from the Planning Portal or OPA
- set up automatic emails to applicants about reasons for non-validation, application registered, decision, etc
- pass e-planning applications to ATRIUMplanning DC or any third-party back-office system
- receive, validate and log e-representations, with automatic email receipt and status updates

Online Planning Search (OPS)

– enables citizens, business, members and officers to search the web for planning applications, view details and make representations. Key features include:

- wide variety of powerful textual and spatial search criteria
- list matching applications, both current or determined
- drill-down to detailed information and attachments, eg important dates, copy of decision notice, related maps and plans through ATRIUM's Document Management system
- submit online comments and representations on current applications

PROGRESSIVE - PROFITABLE - SUSTAINABLE -
PROFESSIONAL - APPROACHABLE - INTEGRITY

Why you need e-Planning software

The Government's modernising agenda requires local authorities to be open and transparent about the planning process. This particularly includes making planning applications and the planning process more accessible to the public via the web. This needs the right software.

Why choose ATRIUM?

ATRIUM e-Planning works either as a stand alone or as part of our integrated four module software suite. It offers one database platform offering shared information with no duplication of data entry.

'We are very pleased to see we have made the right choice in using ATRIUM to provide our e-Government online search facility and planning application submission'

David Palk , Suffolk County Council

More about ATRIUM

We have been successfully delivering high quality software solutions for more than 10 years. We provide the range of technical skills, including Java. We are a Certified Oracle solution partner and Oracle reseller, and are ISO 9001 certified. Our aim is to help your administrative systems perform faster, more efficiently and more cost-effectively, using powerful, easy-to-implement technology.

It's a strategy that has seen our customer base grow to encompass more than 50 organisations throughout the UK. These include local government departments, police forces, facilities management consultancies, transportation and others.

ATRIUMplanning - our integrated planning software suite

ATRIUM e-Planning is one module in a suite of software packages designed specifically to meet the latest regulatory requirements, e-Government objectives and the business challenges facing Local Planning Authorities.

ATRIUM e-Planning can work as a stand-alone or in one seamless system with the other modules:

- Development Control (including appeals, investigations and enforcements)
- e-Planning
- Site Monitoring
- aGIS
