

ATRIUMplanning Highways

What is ATRIUM Highways?

ATRIUM Highways has four elements: Consultations, Agreements, Advance Payment Code (APC) and the e-Government module, Online Highways Searches (OHS). The Agreements element is equally at home as an add-on to Development Control or stand-alone with other third-party systems, enabling the local authority to manage the administration and monitoring of all types of agreements, eg Section 106 agreements that other Council departments use.

What does it do?

Highways is the module in the ATRIUMplanning specialist suite of software, that helps with the consultations and agreements part of planning applications. Working either stand alone or as part of our integrated four module software suite, it offers one database platform with no duplication of data entry.

Consultations

- log planning applications from County or District/Unitary against the relevant site. You can use it to:
 - enter deadline dates so that you can report on progress and responses from the department over any period
 - attach standard conditions, amending and adding text for each application
 - create management reports, eg to analyze response times

Agreements

- record and monitor Section 38, 278 and 106 agreements against the application. You can use it to:
 - record different agreement types against an application
 - create up to 12 user-definable critical dates per agreement type alongside the main details and references
 - set up alerts against any dates to warn of an imminent date or an action that is due – crucial for Section 106 contribution limitation dates
 - link interested parties to the agreement, so you can record relevant internal and external comments
 - hold all elements of the highways development against the relevant plots
 - calculate the estimated cost of the works from a standard schedule of rates held and maintained in the system
 - record bond reductions
 - log and monitor contributions to Section 106 agreements. All contributions, whether monetary or land, can be recorded and tracked in the system

The Agreements element is equally at home as an add-on to Development Control or stand-alone with other third-party systems

PROGRESSIVE - PROFITABLE - SUSTAINABLE -
PROFESSIONAL - APPROACHABLE - INTEGRITY

Advance Payment Code (APC)

– all estimated costs of works and APC details can be recorded. You can also:

- record standard details of the APC and key dates
- link interested parties to the APC, so that relevant internal and external comments can be recorded
- attach each plot against the development, for example when it started and when a bond is secured
- calculate the estimated cost of the works from a standard schedule of rates held and maintained in the system
- record bond reductions

Online Highways Searches (OHS)

– designed to meet the requirements of the e-government agenda. With OHS citizens, business, members and officers can use the web to search the register of highways consultations and agreements and view details. Key features include:

- wide variety of powerful textual and spatial search criteria
- list matching highways consultations or agreements
- drill-down to detailed information and attachments, eg important dates, copy of consultations or agreements, related maps and plans (posted to the web by ATRIUM's Document Management system).

'It has been a pleasure working with this professional company to implement their planning and highways software into Suffolk County Council'

David Palk , Suffolk County Council

More about ATRIUM

We have been successfully delivering high quality software solutions for more than 10 years. We provide the range of technical skills, including Java. We are a Certified Oracle solution partner and Oracle reseller, and are ISO 9001 certified. Our aim is to help your administrative systems perform faster, more efficiently and more cost-effectively, using powerful, easy-to-implement technology.

It's a strategy that has seen our customer base grow to encompass more than 50 organisations throughout the UK. These include local government departments, police forces, facilities management consultancies, transportation and others.

ATRIUMplanning - our integrated planning software suite

ATRIUM Highways is one module in a suite of software packages designed specifically to meet the latest regulatory requirements, e-Government objectives and the business challenges facing Local Planning Authorities.

ATRIUM Highways can work as a stand-alone or in one seamless system with the other modules:

- **Development Control** (including appeals, investigations and enforcements)
- **e-Planning**
- **Site Monitoring**
- **aGIS**
