## What is ATRIUM Site Monitoring?

This software makes it much easier for Mineral Planning Authorities to provide high quality, value for money site visits to monitor minerals and associated waste and landfill planning permissions.

Manages your time and resources, sets up site visits, monitors conditions and generates detailed reports, improves compliance without over-burdening already busy departments.

## What does it do?

– stores all site visit dates, and details of site and planning conditions on a central system, making information accessible and easy to update.

Key features include

- generates appointment letters, sign-off sheets, full site reports detailing compliance and non-compliance with reasons and actions, invoices and management reports
- helps your staff organise visits by date/time and location. It also warns them when a visit is due or when condition compliance dates are imminent
- its handheld device means your team can record site visit information quickly, efficiently and professionally
- compatible with any system: you can download planning applications/ conditions to be monitored from ATRIUMplanning or any third-party system; summary information or investigation/enforcement actions can be uploaded to a DC or Enforcements system
- its flexible design means you can use the system for all monitoring activities, including those outside the new regime
- ATRIUM Site Monitoring is easy to install, use and maintain (especially using ATRIUM's ASP service)

PROGRESSIVE - PROFITABLE - SUSTAINABLE -  
PROFESSIONAL - APPROACHABLE - INTEGRITY

### Why you need Site Monitoring software

Mineral Planning Authorities (MPA's) can now recover the costs of monitoring the conditions relating to minerals and associated waste and landfill planning permissions. Most sites need on average four visits a year, at a cost of £288 per visit, recovering these costs can generate large revenues in many county councils.

But with the bonus of recovering costs comes the obligation to provide high quality, value for money service. With most MPA's making anywhere from 50 to 1000 visits each year, many may have to appoint new staff, or buy in site monitoring facilities.

The ATRIUM Site Monitoring module will enable you to maximise the utilisation of your staff and insure that site visits are completed effectively and efficiently.

### Why choose ATRIUM?

We were the first company to develop and implement a site monitoring system to meet the new regulatory requirement. We did this with the ODPM and Somerset County Council, so you already know that our system has been tried and tested under rigorous real-world conditions.

**'Atrium's helpfulness in developing and implementing their Planning Control software to our specific needs has been exemplary'**

Pete Cheesman, Environment Department, Somerset County Council

### More about ATRIUM

We have been successfully delivering high quality software solutions for more than 10 years. We provide the range of technical skills, including Java. We are a Certified Oracle solution partner and Oracle reseller, and are ISO 9001 certified. Our aim is to help your administrative systems perform faster, more efficiently and more cost-effectively, using powerful, easy-to-implement technology.

It's a strategy that has seen our customer base grow to encompass more than 50 organisations throughout the UK. These include local government departments, police forces, facilities management consultancies, transportation and others.

### ATRIUMplanning - our integrated planning software suite

ATRIUM Site Monitoring is one module in a suite of software packages designed specifically to meet the latest regulatory requirements, e-Government objectives and the business challenges facing Local Planning Authorities.

**ATRIUM Site Monitoring can work as a stand-alone or in one seamless system with the other modules:**

- Development Control (including appeals, investigations and enforcements)
- e-Planning
- Site Monitoring
- aGIS
